Nike Social Media Analysis

This project presents a comprehensive Social Media Analytics Dashboard built using Power BI to analyze brand performance across multiple platforms. It combines KPI tracking, sentiment analysis, marketing funnel insights, and competitor benchmarking into a fully interactive dashboard.

Tools & Technologies

- **Power BI Desktop**
- **DAX (Data Analysis Expressions)**
- **Power Query (Data Cleaning)**
- **Excel Dataset**

Dataset Description

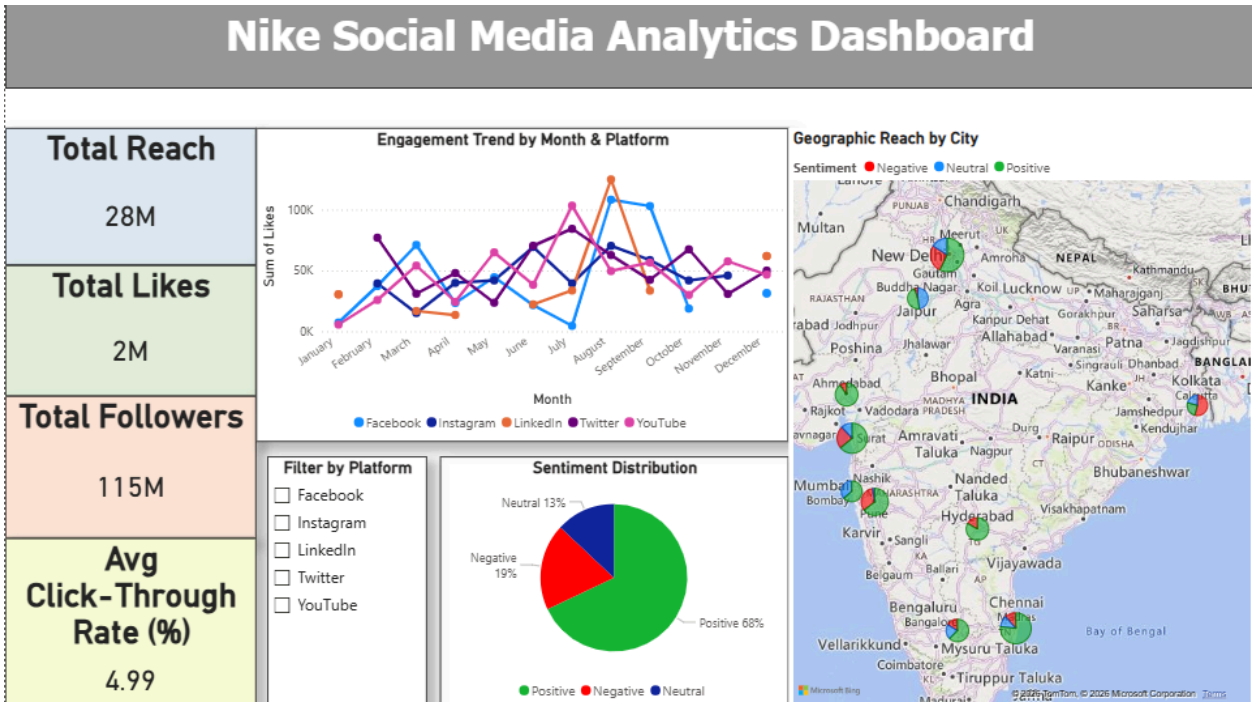
The dataset consists of 4 main tables:

- **SocialMediaPosts – Post-level engagement data (likes, comments, reach, sentiment, etc.)**
- **CompetitorAnalysis – Brand-wise metrics across platforms**
- **KPI_Summary – Monthly aggregated KPIs**
- **Funnel_Data – Marketing funnel stages and user drop-off**

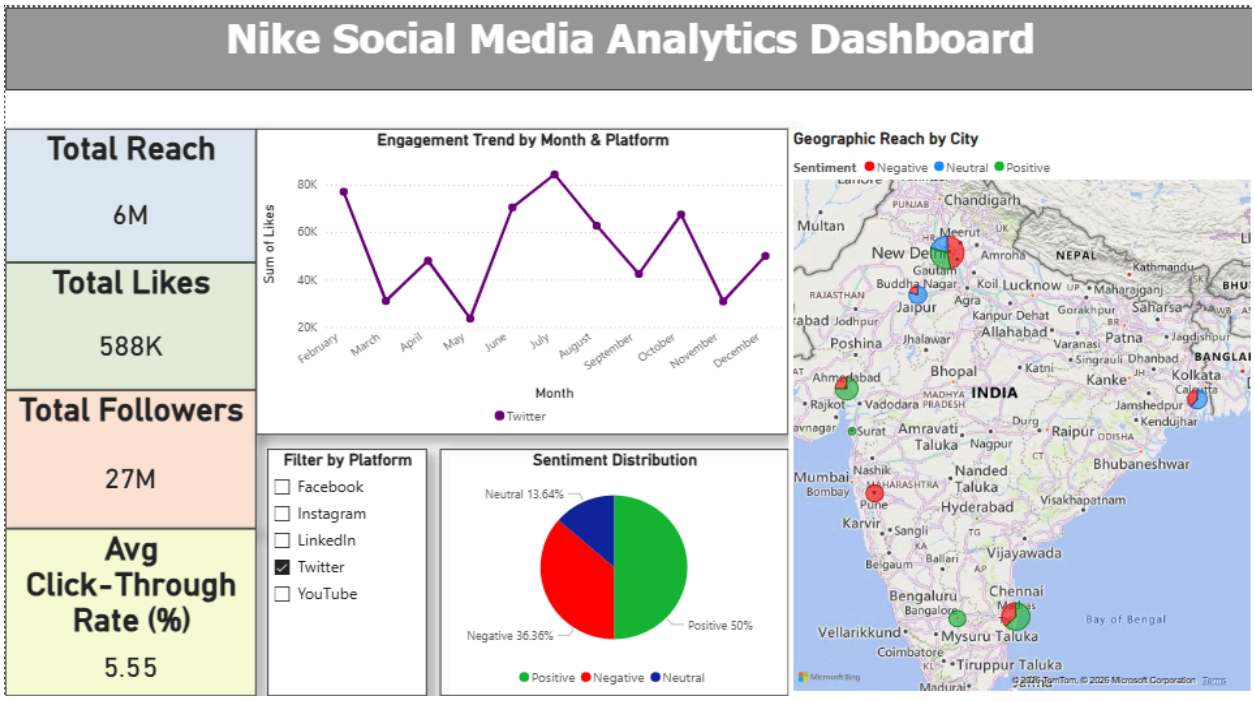
Aim: Create a dashboard including KPI Cards (Engagement, Reach, Followers), Pie chart (Sentiment), Line chart (Trends), Map (Location) on social media posts related to specific brand using the PowerBI.
Execution: 1. Load data from Excel → Power Query cleanup 2. Set up table relationships 3. **4 KPI Cards** — Reach, Likes, Followers, Avg CTR 4. **Pie Chart** — Sentiment (Positive/Negative/Neutral) from Sentiment column 5. **Line Chart** — Monthly engagement trend, split by Platform 6. **Map** — Bubble map using Location + Reach columns 7. Platform slicer to make it interactive

Dashboard:

Overall



For Twitter only



Interpretations

KPI Cards

Total Reach — 27.7M

The brand's content collectively reached 27.7 million unique users across all platforms in 2024. This is a strong top-of-funnel signal. The brand has significant visibility in the market.

Total Likes — 2.4M

Out of 27.7M people reached, 2.4M actively liked the content, giving a Like-to-Reach ratio of ~8.7%. This is above industry average (typically 3–5%), indicating the content resonates well with the audience.

Total Followers — 115M

The cumulative follower base across all platforms is 115 million, showing a very large and established brand presence. However, this is the *sum* across 100 posts' account sizes the actual unique brand account followers would be lower. It reflects consistent audience growth.

Avg CTR — 4.99%

The average Click-Through Rate of ~5% is excellent. Industry benchmarks are: Facebook ~0.9%, Instagram ~0.6%, Twitter ~1.5%. A 4.99% CTR means content is driving strong user action, people are not just viewing but clicking through to the brand's site/product pages.

Pie Chart — Sentiment Distribution

Sentiment	Posts	%
Positive	**68**	**68%**
Negative	**19**	**19%**
Neutral	**13**	**13%**

68% positive sentiment is a healthy brand perception score. However, 19% negative sentiment (nearly 1 in 5 posts) is a concern the brand should investigate which platforms or post types are driving negative reactions and address those in future campaigns. Neutral sentiment (13%) represents an opportunity to convert fence-sitters through more engaging content.

Line Chart — Monthly Engagement Trend

Peak Month	Likes
August 2024	**415,773 (highest)**

June–July	**Steadily rising**
Jan 2024	**43,305 (lowest)**

Engagement follows a clear seasonal pattern: it peaks in August (possibly summer campaigns, product launches, or sporting events) and drops significantly in January. Marketers should front-load campaign budgets from June to September to capitalize on peak engagement windows. January's low engagement suggests post-holiday audience fatigue.

Map Visual — Location-wise Reach

City	Reach
Delhi	**5.1M (highest)**
Chennai	**4.3M**
Surat	**4.0M**
Mumbai	**1.7M (surprisingly low)**

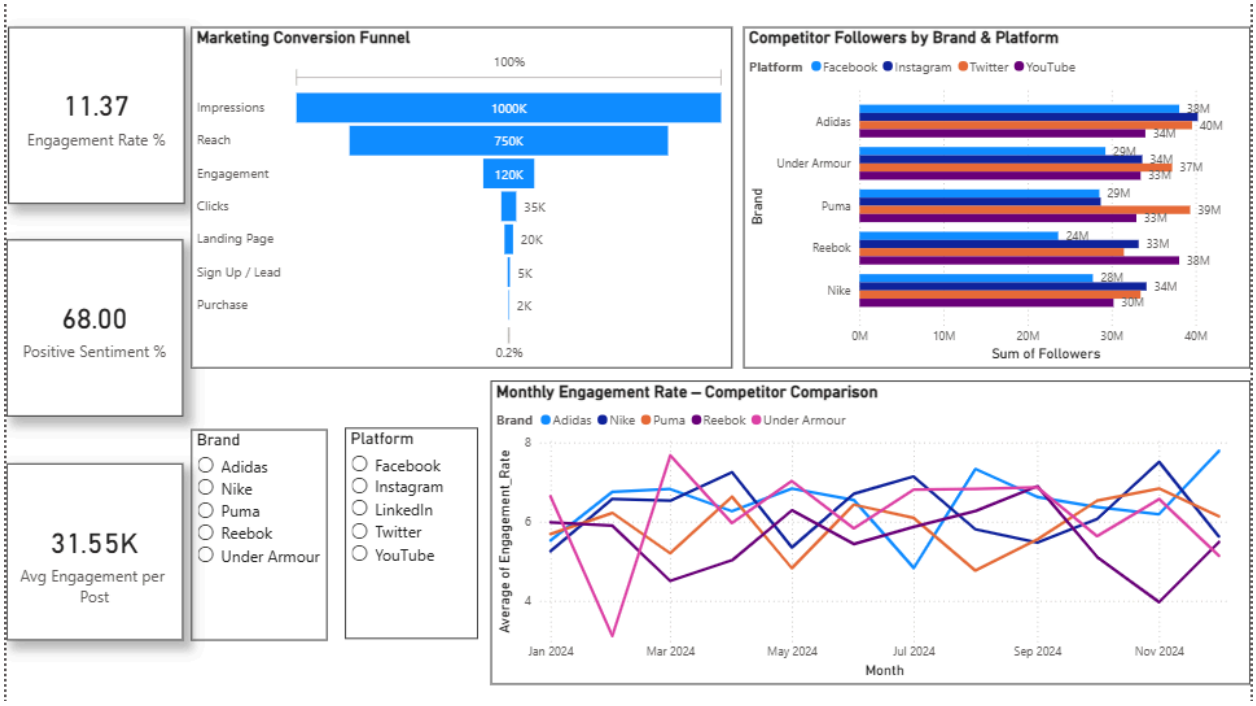
Delhi dominates reach, making it the primary target market. Interestingly, Mumbai (India's financial capital) ranks lowest, suggesting either underinvestment in Mumbai-targeted content or lower platform usage in that demographic. The brand should consider geo-targeted campaigns specifically for Mumbai and Kolkata (also low) to balance market penetration.

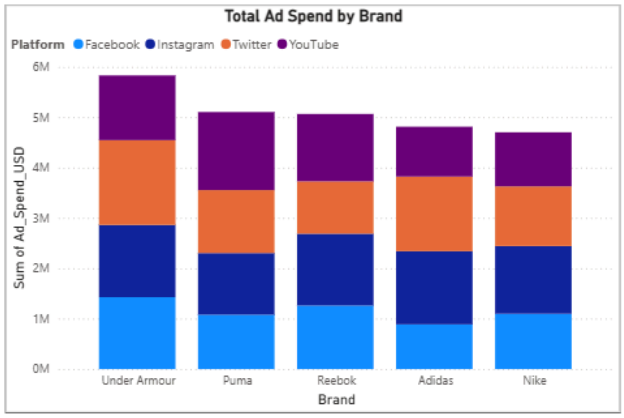
Aim: To create dynamic KPI Dashboard with Filters DAX measures, fully interactive dashboard, Funnel analysis and Comparative Competitor dashboard using power BI tool.

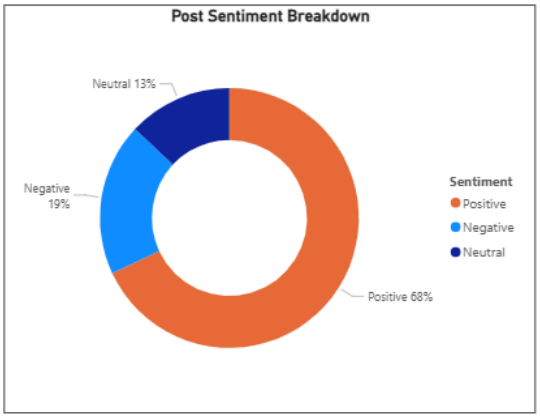
Execution:

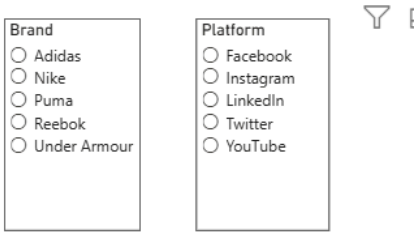
1. **5 DAX Measures** — Engagement Rate %, Total Engagements, Positive Sentiment %, MoM Growth, Avg per Post
2. **Date Range Slicer** — Makes the whole dashboard dynamic
3. **KPI Cards** using DAX measures (with targets)
4. **Funnel Chart** — Full marketing funnel from Funnel_Data sheet
5. **Competitor Bar + Line + Stacked Column** charts from CompetitorAnalysis
6. **Matrix Heatmap** — Brand vs Platform engagement with conditional formatting
7. Drill-through page for brand-level detail

Dashboard: Dynamic Social Media KPI Dashboard – Brand Analytics









Engagement Rate – Brand vs Platform

Brand	Facebook	Instagram	Twitter	YouTube	Total
Adidas	6.13	6.65	7.00	6.17	6.49
Nike	6.99	5.97	6.19	5.95	6.27
Puma	4.98	6.24	6.67	5.74	5.91
Reebok	5.15	5.08	5.59	6.42	5.56
Under Armour	5.97	6.34	5.80	6.57	6.17
Total	5.85	6.06	6.25	6.17	6.08

Interpretations

DAX KPI Measures

Engagement Rate % = (Likes + Comments + Shares) / Reach × 100

Platform	Engagement Rate
Facebook	12.8% Highest
Twitter	12.7%
Instagram	12.3%
LinkedIn	10.4%
YouTube	9.4%

Facebook and Twitter drive the **highest engagement rates**, despite YouTube having the highest raw reach (7.9M). This means YouTube brings in a large audience but they are more passive viewers. The brand should **prioritize interactive content on Facebook and Twitter** while using YouTube as a brand awareness tool.

Funnel Chart — Marketing Conversion Funnel

Stage	Users	Drop-off
Impressions	1,000,000	—
Reach	750,000	25% lost
Engagement	120,000	84% lost
Clicks	35,000	71% lost
Landing Page	20,000	43% lost
Sign Up / Lead	5,000	75% lost
Purchase	1,500	70% lost

Reach → Engagement (84% drop-off). Only 16% of people who see the content actually engage. This is the **most critical bottleneck** i.e. improving content quality, using stronger CTAs (Call to Action), and A/B testing post formats could significantly boost engagement. The final conversion from Sign Up to Purchase (30%) is relatively healthy.

Competitor Comparison Insights

Avg CTR of 4.99% vs industry standard of ~1–2% means Nike is significantly outperforming typical benchmarks. In the competitor sheet (Adidas, Puma, Reebok, Under Armour), you can compare:

Brands with **higher ad spend don't always have higher engagement rates**. This shows that content quality and audience targeting matter more than budget alone. Use the Matrix Heatmap to identify which brand × platform combination delivers the best ROI.
